

ABSTRACT

An apparatus for holding a pastry item, includes a container member for at least partially containing a pastry item, e.g., a cookie. The container member is dimensioned and configured for insertion into a vessel containing a liquid therein. The container member includes at least one support surface and has at least one aperture extending through the one
5 support surface, whereupon at least partial insertion of the container member within the vessel, the liquid passes through the one aperture to contact the pastry item contained therein.

The apparatus may also include a handle member depending from the container member. The handle member is dimensioned for grasping engagement by the user to facilitate insertion and manipulation of the container member within the vessel.
